

BAZAAR PROJECT REPORT

Introduction to the Dataset

The dataset used in this project was sourced from a real company named Bazaar, a digital platform serving retailers and wholesalers in the FMCG sector. This dataset includes user signup records, order history, sales data, delivery time, and user acquisition channels.

The goal of this analysis is to uncover meaningful insights to help marketers and decision-makers better understand user acquisition performance, sales trends, product demand, and overall business efficiency.

Key marketing problems addressed:

- Which channels are bringing the most valuable users?
- What are the trends in signups, orders, and conversions?
- Who are the top customers and products?
- How efficient is order fulfillment?

Data Preparation

The dataset was cleaned and transformed in Power BI to ensure accurate reporting and visualization. Below are the key steps taken:

- **Missing Values:** Identified and removed rows with critical missing fields (e.g., missing signup or order dates).
- **Duplicates:** Removed duplicate user IDs and order IDs.
- **Date Formatting:** Transformed date fields to standard formats and extracted week/month/year where needed.
- **Derived Columns:** Created new fields such as Week Number-Year for trend analysis.
- **Channel Classification:** Grouped users by acquisition channels (Google, Facebook, Organic, etc.).
- **Sales Metrics:** Ensured all sales values were in consistent units (millions).

Dashboard Overview

The dashboard was developed in Power BI, providing a comprehensive, interactive view into key marketing KPIs and trends.

Key Visualizations:

- **Signup Trend Over Time:** Shows user acquisition from Oct 2024 to Mar 2025. A strong upward trend is seen in Q1 2025.
- **Conversion Trend Over Time:** Tracks the percentage of users placing at least one order. Conversion rates spiked in January 2025.
- **User Distribution by Channel:** Bar chart showing Google as the leading source of user acquisition.
- **Paid vs Organic Signups:** Gauge chart showing that 50% of users signed up via paid channels.
- **Repeat vs One-Time Buyers:** Pie chart showing 72% of users have placed at least one order.
- **Weekly Sales & Orders Trends:** Line charts highlighting upward weekly performance.
- **Total Orders & Total Sales:** KPI cards showing 9,104 orders and PKR 197 million in sales.
- **Top 20 Products:** Tree map showing most frequently ordered items (e.g., Olper's Milk, Ariel Washing Powder).
- **Average Delivery Time:** Gauge showing efficient order delivery averaging 1.14 days.
- **Order Status Distribution:** Pie chart showing the majority of orders are closed successfully.

Insights & Recommendations

Insights:

- **Channel Performance:** Google is the top-performing acquisition channel in both user volume and conversion.
- **Conversion Trends:** Highest conversions occurred in January 2025, suggesting effective campaigns or promotions.
- **Product Demand:** FMCG products like milk, tea whitener, and washing powders dominate orders, guiding inventory planning.
- **Sales Growth:** Weekly sales trends show consistent growth, indicating strong market demand.
- **Order Fulfillment:** Fast average delivery time (1.14 days) contributes positively to customer experience.
- **User Engagement:** 72% of users placed at least one order, suggesting strong product-market fit.

Recommendations:

- Invest more in Google Ads, as it brings the most and highest-converting users.
- Introduce loyalty programs to increase repeat purchases.
- Analyze January campaign strategies and replicate similar tactics in upcoming quarters.
- Use product data to guide future stocking and promotional strategies.

Conclusion

This marketing analytics project effectively utilizes real-world data from Bazaar to answer critical business questions. The Power BI dashboard provides a clear and actionable story on user acquisition, order trends, and product performance. These insights are essential for marketers to allocate budget wisely, boost customer engagement, and optimize sales strategies.

By leveraging data visualization and analysis, Bazaar can make informed, strategic decisions that drive business growth.
